About us

Wildlife Research

As part of our conservation efforts, we conduct wildlife research to monitor species, understand ecosystems, and inform strategies that protect biodiversity, ensuring long-term sustainability and harmony between nature and people.

Wildlife Education

We provide wildlife education to raise awareness, foster respect for nature, and empower communities—especially youth—to actively participate in conservation efforts and make informed decisions that support environmental sustainability.

Wildlife Conservation

We promote wildlife conservation to protect species, preserve ecosystems, and ensure a balanced, sustainable environment for future generations.

Our Nature

Protect it before
it is too late

HOW CAN YOU SAVE NATURE?

1) Plant Trees and Native Plants

Green your space to improve air quality and provide habitats for local wildlife.

2) Photograph Native Wildlife

Spend time watching and capturing images of local wildlife to connect with nature and raise awareness about the importance of protecting native species.

3) Support Local Wildlife

Put out bird feeders and clean water sources to help birds and small animals, especially during extreme weather or food scarcity.

4) Say No to Hunting & Poaching

Avoid supporting or participating in excessive hunting and poaching, and report illegal wildlife activities to help protect endangered species.

5) Educate Others

Share knowledge about environmental issues and encourage responsible habits in your community.

This pamphlet aims to raise awareness about wildlife conservation, highlight threats to animals and habitats, and inspire individuals to protect biodiversity through education, responsible actions, and community involvement.
